SKILLS

- **Web Technologies:** React.js, Node.js, MongoDB
- **Programming Languages:** TypeScript, Javascript, Python, C, Erlang
- **Cloud Infrastructure:** AWS (EC2, Route 53, S3, CloudTrail, IAM, Python Boto3)
- **Infrastructure as Code (IaC):** Terraform, CI/CD Pipeline Development
- **Automation & Scripting:** Python (Boto3), PowerShell, Bash, JavaScript/Node.js

EDUCATION

AI Software Engineer (Training) · TripleTen – Remote Apr 2026 – Present

- Completing a structured full-stack AI Software Engineering bootcamp; curriculum includes Typescript, Node.js, React, MongoDB, Docker, and AWS deployment.

B.S. in Software Engineering · Pennsylvania State University Aug 2022 - May 2024

EXPERIENCE

Professional Development / Stay-at-Home Parent · Self – Virginia May 2024 – Apr 2026

- Experimented with different programming paradigms (Erlang, Rust, and bash scripting) and embedded systems in C.
- Obtained both CompTIA A+ and Security+ certifications, validating fundamental IT concept knowledge.

Site Reliability Engineer · Blue Sentry Analytics – Remote Mar 2022 – Aug 2022

- Orchestrated AWS Elasticsearch cluster upgrades across 5 accounts and 2 regions using Python and Boto3, managing a heterogeneous environment where roughly half the clusters ran unique software versions.
- Automated pre-upgrade cluster snapshots to enable safe rollback; personally executed 2 rollbacks on failed upgrades and communicated outcomes to affected customers.
- Updated Terraform configuration post-upgrade to reflect new cluster versions across all accounts, maintaining IaC accuracy throughout the process.
- Deployed AWS Route 53 WAF rules via Terraform and monitored 5+ client environments in a 24/7 on-call rotation using Datadog and AWS CloudTrail.

Systems Administrator · Praxis Engineering Inc. – Chantilly, VA Aug 2019 – Mar 2022

- Wrote PowerShell script from scratch to retrieve and apply OEM Windows activation keys automatically, eliminating a manual post-imaging step.
- Authored a PowerShell module that connected to Microsoft 365 and automated bulk removal of departing users from all M365 groups, replacing a previously manual and time-constrained process.
- Designed a custom software system for AWS EC2 software upgrade testing, increasing upgrade confidence and improving software update speed by 94%.
- Administered Windows Server infrastructure for ~75–80 endpoints across geographically separated sites connected via VPN, maintaining patch compliance via WSUS across segmented subnets and VLANs.
- Led transition from manual system imaging to WDS/MDT lite-touch deployment, reducing re-imaging to a single USB-and-ethernet process.
